

The Gantt chart illustrates the execution of a Lua program. The horizontal axis represents time, divided into columns for days of the week (S, M, T, W, T, F, S) and rows for time slots. The vertical axis represents the duration of the program. The chart shows a long horizontal bar at the top, indicating a long execution time. The program starts at the top left and proceeds downwards, with a long horizontal bar indicating a long execution time. The chart shows the program running for a long duration, with a final red box indicating the end of the execution.
